# Web Deploy to IIS From Visual Studio 2013
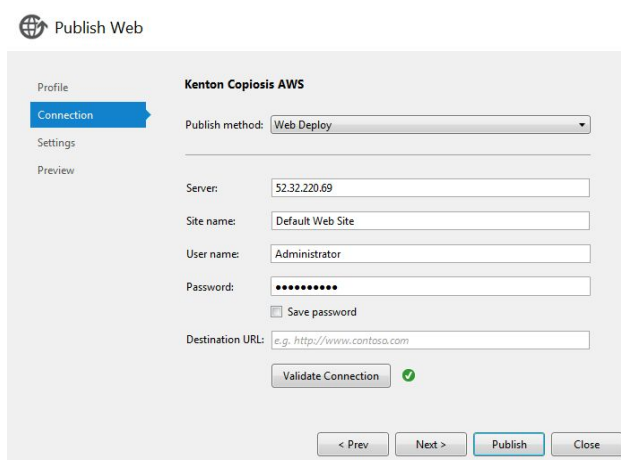

1. From the Build menu, to go "Publish Copiosis_Application"

2. Create a Profile for the server you wish to deploy to. (Eg, Chico or Kenton. You will need a profile for each server.) Then click "Next."

3. On the Connection step, choose the "Web Deploy" method, enter the server IP address, "Default Web Site" for site name, and "Administrator" for the username. Use the same password as when performing a remote desktop session. Press "Validate Connection" to verify.

4. Skip to Preview, click on "Start Preview" to verify that it will build and transfer properly. Then click on "Publish."
